LUMBER PRODUCTION in the UNITED STATES, 1799-1946

Compiled by

HENRY B. STEER[1/]
Forest Economist, Division of Forest Economics
Forest Service

INTRODUCTION

Detailed records of lumber production in the United States are scattered in about 50 publications. Most of these are out of print and generally unavailable (except in libraries) to foresters, lumbermen, economists, and others interested in the lumber industry.

The purpose of this publication is to provide in condensed form for ready reference (1) all of the available record of lumber production, both as reported to the Bureau of the Census or to the Forest Service, (2) revised figures for total lumber production for certain years as estimated by the Forest Service, (3) the record of lumber prices for the years for which prices were obtained.

SOURCE OF PRODUCTION STATISTICS

The earliest record of lumber production in the United States is contained in the census of 1809. With the exception of 1829, the record has been continued in each subsequent decennial census, and annually since 1904. Many Federal, State, and private agencies have cooperated with the Bureau of the Census and the Forest Service in the collection of data on lumber production and value, including the National Lumber Manufacturers Association, several regional lumber associations, New York and several other individual States, and the Tennessee Valley Authority.

The Bureau of the Census was primarily responsible for the collection and publication of such statistics decennially from 1809 through 1899 and annually from 1904 through 1946, with the exception of 1905, 1906, 1913, 1919 to 1918, inclusive, and 1920. The Forest Service was primarily responsible for the collection and publication of the data for 7 of the 8 years just listed, and the Bureau of Crop Estimates of the

---

1/ Assisted by Lake F. Compton, Lucile L. Gumaer, and Irene W. Uderitz.

Department of Agriculture collected the basic information for the year 1913. No bulletin was issued for 1914. However, a summary of the 1914 production statistics obtained by the Bureau of the Census was published with the 1915 statistics obtained by the Forest Service.

In the earlier years, i.e. up to and including 1859, only the value of the lumber was reported, with some reference to the number of mills or to the number of saws. Beginning with 1869, both the total quantity of lumber produced and its value were reported by States, but it was not until 1899 that lumber production and value were reported by States and species.

METHODS OF OBTAINING PRODUCTION STATISTICS

Except in the decennial censuses where there was some follow-up of nonreporting mills by field agents, lumber production and price statistics were obtained by means of a mail canvass of the entire country through 1912. Since 1912 the census in the western United States has been conducted by mail supplemented by a field canvass to obtain reports from nonrespondents. In the Eastern States production statistics were obtained by a mail canvass through 1941. In 1940, however, the Forest Service in cooperation with the Bureau of the Census made a field canvass of lumber production in 14 of the 35 Eastern States 2/; in the remaining States mail questionnaires were used. In 1941 13 Eastern States 3/ were covered by means of a field canvass. In 1942 production for the entire East was obtained for the first time by a complete field canvass. From 1943-46 production data for the East were obtained by field surveys of selected regions, supplemented by data for other regions obtained in Forest Service surveys of monthly lumber production.

As a result of the 1940 and 1941 field canvasses in the East, and particularly that of 1942, thousands of small sawmills not previously included in the annual census were covered for the first time, and many larger mills were also located. Some of these mills were new in the year in which they were first located, but most of them had been operating much longer. These field enumerations of the Eastern States resulted in such great increases in lumber production, as well as in number of mills, that it was readily evident that figures for the years when production was obtained solely by mail were not usable as statistics until revised to include the nonreported production. The following data for

---

2/ Alabama, Arkansas, Florida, Georgia, Louisiana, Michigan, Minnesota, Mississippi, North Carolina, Oklahoma, South Carolina, Texas, Virginia, and Wisconsin.

3/ Connecticut, Delaware, Indiana, Maryland, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, Rhode Island, Ohio, West Virginia, and Wisconsin.

six representative Eastern States and three Prairie States show the number of reporting mills that cut over 50 M feet of lumber in the last year that production figures were obtained by means of a mail canvass, and in the first year that they were obtained by a field canvass. This illustrates the typical incompleteness of mail coverage:

State	Number of mills	
	By mail canvass	By field canvass
Georgia	1,083 (1939)	1,919 (1940)
Virginia	1,068 (1939)	2,004 (1940)
Maryland	86 (1940)	407 (1941)
West Virginia	273 (1940)	1,067 (1941)
Missouri	291 (1941)	1,071 (1942)
New York	284 (1941)	548 (1942)
Iowa, Kansas, Nebraska	36 (1940)	330 (1942)

REVISED ESTIMATES OF PRODUCTION

In view of the long-recognized fact that reasonably complete statistics of lumber production cannot be obtained solely by mail canvass, the Forest Service has made revised estimates of lumber production that are designed to include the production of nonreporting mills as well as that of reporting mills.

Revised estimates to indicate the approximate true magnitude of actual lumber production are needed for various purposes. To maintain up-to-date information for the Forest Survey of the Nation's timber resources, accurate data on forest drain are essential. Estimates of potential requirements for lumber and prospective future drain upon timber resources are based in part upon trends in past consumption and production. Accurate series of economic and industrial activity require accurate production figures. Historical records of actual production are also of value in determining production prospects and the need of industry for equipment, labor, etc. during periods of national emergency.

Estimates for 1799 to 1899, Inclusive

The earliest Census reports - i.e., for decennial years 1809-19, 1839, 1849, and 1859 gave only the value of the lumber produced with incomplete reference to the number of mills or to the number of saws. National lumber production by softwoods and hardwoods for these years was estimated on the basis of the values reported by the Census and available

records of lumber prices. Estimates for 1799, made to carry the records back to the beginning of the century, and estimates for 1829 were made mainly by extending the trend that had been developed for other years.

Production as reported by the Census for the decennial years 1869, 1879, 1889, and 1899 was accepted as substantially correct and no revised estimates were made for these years.

Estimates for 1904 to 1928, Inclusive

In revising lumber production statistics for the period 1904-28, the production reported by the Bureau of the Census for the decennial years 1909 and 1919 was assumed to be approximately correct for both Eastern and Western States and no increases were made. For other years the reported production for Eastern States was increased, largely on the basis of judgment, by quantities designed to include the production of nonreporting mills. For the years 1904-08 and 1910-14, national production was estimated by softwoods and hardwoods, but these estimates were not broken down by States or regions. For the years 1915-18, and 1920, national production was estimated by softwoods and hardwoods and by species; State totals were estimated for all species combined. Estimates for the period 1920-28, made cooperatively with the Federal Reserve Board for its use in computing index numbers of commodity production, were broken down to State totals by hardwoods and softwoods.

The revised estimates of lumber production from 1904 through 1928 have been published in whole or in part by the Forest Service 4/, by the National Lumber Manufacturers Association 5/, and by the Federal Reserve Board 6/, and are included in this publication as previously released.

Estimates for 1929 to 1941, Inclusive

Revised estimates of lumber production in the Eastern States during the period 1929 to 1941, inclusive, were made to show total softwood and hardwood production by States. Totals were not broken down by individual species.

4/ In A National Plan for American Forestry. (U.S.) Cong. 73rd., 1st sess. S. Doc. 12, p. 248; and Lumber Production, 1869-1934. (Processed.) 1934.

5/ In Lumber Industry Facts. 1939, 1941, and 1943.

6/ In Federal Reserve Bulletin. Sept. 1931.

For the year 1941, production as reported by the Census for the 13 Eastern States covered by a field canvass in that year was taken as correct. Actual production in the remaining 22 Eastern States was estimated by the staffs of the several regional experiment stations of the Forest Service on the basis of sample studies that determined actual mill population in each State. The reported production for each mill size class in each State was increased in proportion to the increase in number of mills as determined by the field samples.

For the year 1940, lumber production as reported by the Census for the 14 States that were covered by a field canvass in 1940 was taken as correct. Production for each of the remaining 21 Eastern States was estimated for 1940, and for each of the 35 Eastern States for 1939 and preceding years back to and including 1929, as follows:

1. Production of active but nonreporting mills was estimated for each State individually, rather than by regions or for the entire East, for two reasons: (a) For several years prior to 1942, Census mailing lists were augmented from Forest Service records and from other sources for a number of States. The extent of such augmentation varied by States and the relative completeness of returns therefore varied correspondingly; (b) the nonreporting mills in general included the smaller mills; the large mills were more apt to be known and included on Census mailing lists. A State characterized by small mills therefore tended to have production reported less completely than a State characterized by large mills. 7/

2. The number of active but nonreporting mills in each State was tentatively estimated as equal to the difference between the number reported for the last year a State was covered by a mail canvass and the number found in the first year of complete coverage by a field canvass. This procedure was based on evidence that most of the mills from which reports were received for the first time in 1940, 1941, or 1942 actually operated in earlier years.

3. The number of nonreporting mills was distributed by size classes in such a manner as to make the distribution for the last year of a mail canvass approximate the distribution by size classes in the first year of complete coverage.

4. A final estimate of the number of nonreporting mills in each size

---

7/ In Georgia, for example, 99 percent of the mills, each cutting less than 5 million feet, produced 89 percent of the total State production in 1940; in Louisiana 80 percent of the mills, each cutting less than 5 million feet, produced 26 percent of the total State production.

class was made for each year of the period 1929-41 on the basis of trends in numbers of mills as reported to the Census, on the assumption that both reporting and nonreporting mills of the same size class would tend to follow about the same production pattern. This adjustment in number of nonreporting mills also recognized known changes in completeness of coverage. For example, in 1934 the activities of the National Recovery Administration resulted in increased completeness of reporting. Though relying to a large extent on judgment, adjustments were based upon known trends in the industry, upon numerous observations of field personnel, and upon an intimate knowledge of the conduct of each annual census in this period.

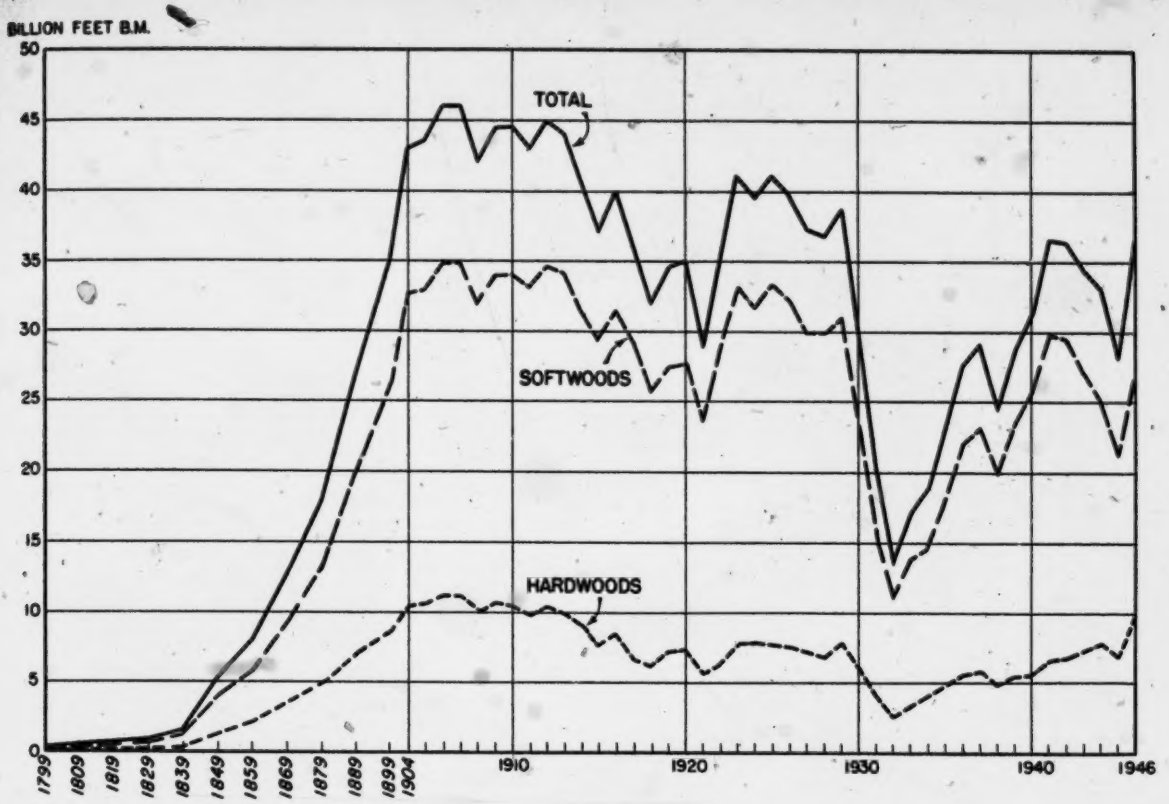
5. The average production of nonreporting mills in a given size class in a given year was assumed to be approximately the same as the average production of that year for reporting mills in the same size class. Total production of nonreporting mills was then computed from the number of mills and average production for each size class, and added to the reported production to obtain an estimate of actual total production.

Final estimates of production were subjected to a number of checks. These included comparison with records of industrial production; value of building construction; railway shipments of lumber, lath, and shingles; commodity prices; and national employment and income. On the basis of rough correlations with these economic series, it is believed that the revised estimates of lumber production are in reasonable accord with trends in related fields of business activity.

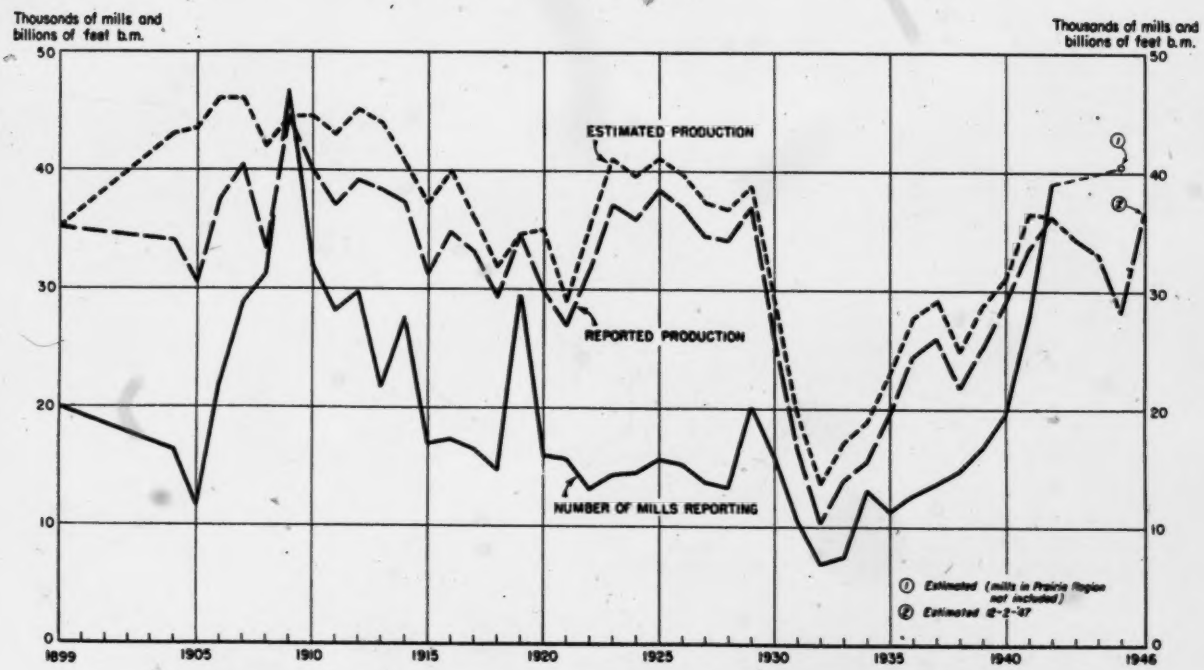
No revision of production statistics for the Eastern States was made for the year 1942, nor for the period 1943-45 since production data for these years are believed to be reasonably complete. Data for the 11 far Western States and South Dakota also were not revised since the method used throughout the period 1929-45 - mail questionnaires plus field follow-up - is believed to have given complete coverage of production.

At the time this publication went to press, final production statistics for 1946 were available by States and species for the four western regions, the South and South Atlantic regions, and New Hampshire and Tennessee. Forest Service estimates by softwoods and hardwoods, but not by individual species, have been made for the remaining States.

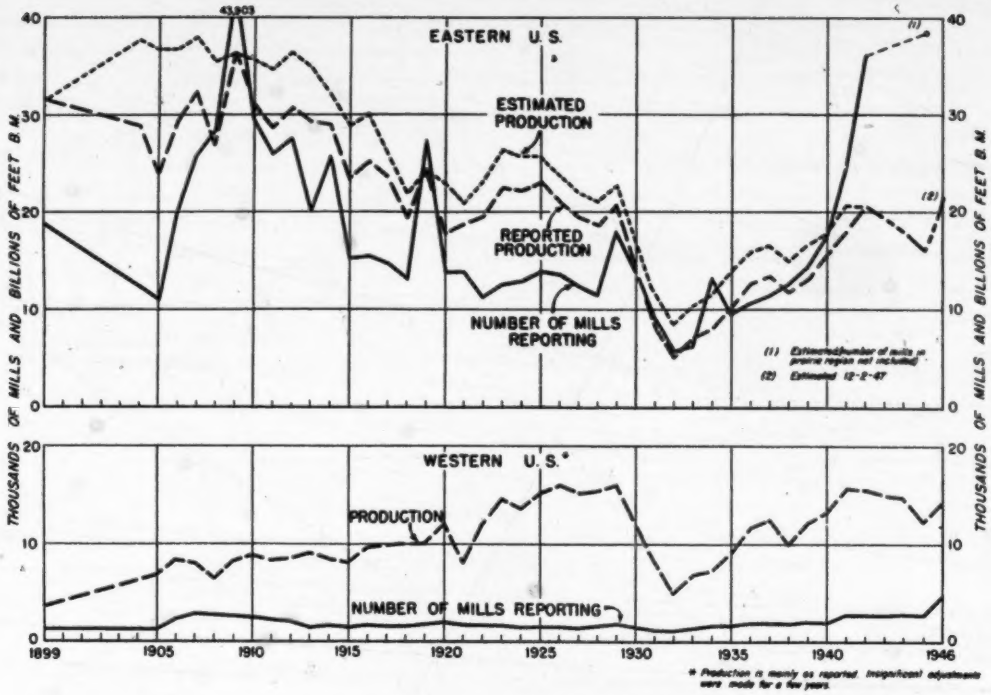
The five charts that follow show reported and estimated lumber production and price trends, 1799-1946; the sixth shows the lumber-producing regions as considered in this publication. A break-down of the figures illustrated in the charts will be found in tables 1, 2, and 5.



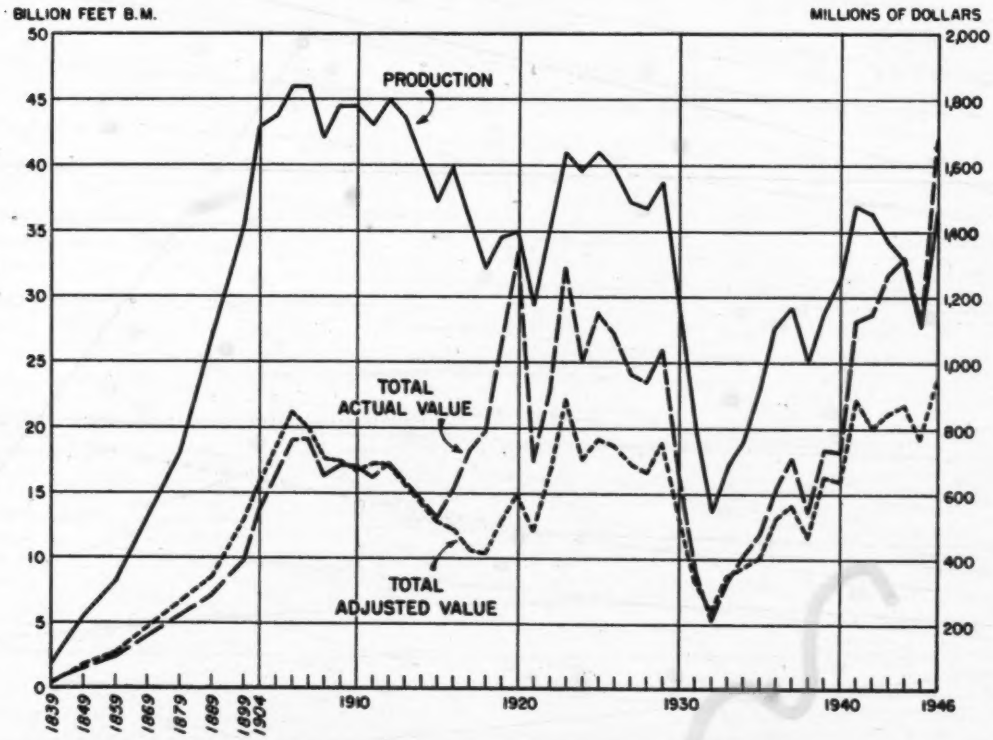
Production of sawed timber in the United States, specified years, 1799-1946.



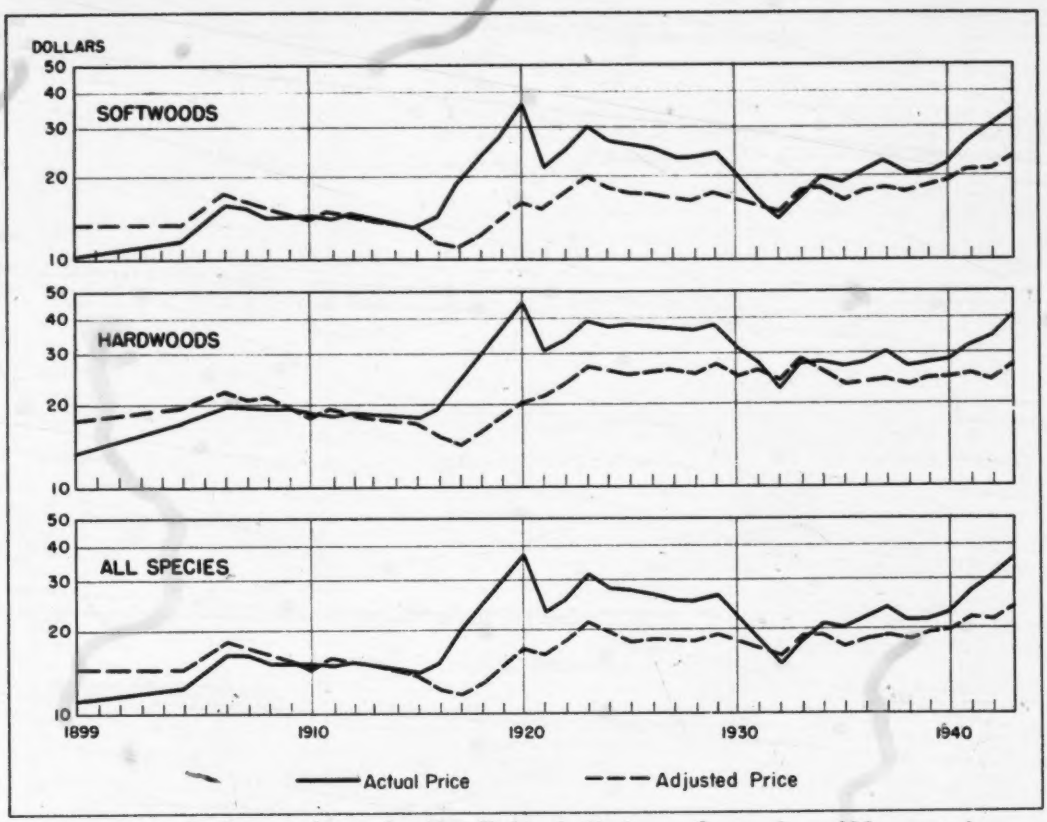
Estimated and reported lumber production in the United States, and number of sawmills reporting, specified years, 1899-1946.



Estimated and reported lumber production, and number of sawmills reporting, in eastern and western United States, specified years, 1899-1946.



Total volume and value of lumber produced in the United States, specified years, 1839-1946. Values shown are actual f. o. b. mill, and adjusted to the purchasing power of the dollar in 1910-14, i.e., 100 percent.



Average lumber prices in the United States, f. o. b. mill, specified years, 1899-1943.

Lumber-producing regions in the United States, 1947.

1/ F. o. b. the mill.
2/ Adjusted to the purchasing power of the dollar in 1910-14, i. e., 100 percent.
3/ Estimated by applying Bureau of Labor Statistics index of lumber prices to the 1945 average.

Table 3.—Value of lumber produced, by State and region, 1839, 1849, and 1859

1/ Number of sawmills not available.
2/ Includes Indian Territory.
3/ Includes Nebraska except where otherwise indicated.
4/ Includes Nebraska and North Dakota.
5/ Kansas only.
6/ California only in 1889, 1908, and 1909; other years include Nevada.
7/ Includes New Mexico and Nevada.

1/ Prices are given "f.o.b. mill" except for 1899 and 1904 for which prices are not so recorded.
2/ Reported as red fir.
3/ Includes a small quantity of mixed softwoods.
4/ Includes 2,431 M feet of "Alpine" fir.
5/ Includes some 3,000 M feet of lumber of species not definitely stated in the report.
6/ Reported as tamarack.
7/ Reported as yellow pine.
8/ Probably includes some lodgepole pine.
9/ May include some tupelo.
10/ Probably includes aspen in some States.

1/ Production of total softwoods, total hardwoods, total all species, and individual western species are as given by the Census. Production of eastern species has been estimated by the Forest Service.
2/ Includes 833 M feet of "Big tree".
3/ Includes 165,305 M feet of softwood lumber, not distributed by species, sawn in New England States by the Northeastern Timber Salvage Administration.
4/ Includes 57 M feet of Douglas-fir.
5/ Data for the Prairie States, 2,280 M feet b.m. softwoods and 84,321 M feet b.m. hardwoods, total of 86,701 M feet b.m. are included only in the totals. Data for species are not available.
6/ Includes 7,605 M feet of hardwood lumber, not distributed by species, sawn in New England states by the Northeastern Timber Salvage Administration.
7/ Includes 172,910 M feet of lumber, not distributed by species, sawn in New England states by the Northeastern Timber Salvage Administration.
8/ Figures preceded by an • are Forest Service estimates.

1/ Probably principally red gum. Some tupelo may be included.
2/ Probably includes aspen in some States.
3/ And Indian Territory.
4/ California and Nevada.
5/ Reported as red fir.
6/ Reported as tamarack.
7/ Reported as yellow pine.

1/ Probably principally red gum. Some tupelo may be included.
2/ Probably includes aspen in some States.
3/ And Indian Territory.
4/ California and Nevada.
5/ Reported as tamarack.
6/ Reported as yellow pine may include lodgepole pine in some western States.
7/ Original publication shows 11,289 M feet of yellow pine and 1,750 M feet of walnut produced in Nevada and Oklahoma. The yellow pine has been credited to ponderosa pine in Nevada and the walnut to Oklahoma.

1/ Indian Territory.

2/ And Nebraska.

3/ The production in Arizona, Nevada, and New Mexico was combined and given as that of "All other States" in the original publication. The production in Nevada and New Mexico has been combined with that of Arizona and the entire production allocated to the Southern Rocky Mountain region.

UNITED STATES TOTAL (Estimated)	Estimated total not distributed by States or Species													34,900,000	46,000,000

1/ "Other States" in original publication consisted of Kansas and Oklahoma, and production, all hardwood, was given as cottonwood 30, elm 40, hickory 80, oak 45, walnut 1,000 and "other" 48. The production of cottonwood, hickory, oak and "other" were included with the production given for Indian Territory and the total shown as the production of Oklahoma. The elm and walnut are shown as produced in Kansas.

Table 13.--Reported hardwood and softwood lumber production, by State and region, 1907

1/ California and Nevada.
2/ Includes a small quantity of mixed softwood.
3/ Probably includes lodgepole pine.

Table 14.--Reported hardwood and softwood lumber production, by State and region, 1908

(Thousand feet board measure)

1/ California and Nevada.
2/ Including "Alpine" fir as follows: Colorado 1,548, Idaho 600, Montana 10, and Utah 275.
3/ Probably includes lodgepole pine.
4/ Includes some 3,000 M feet of lumber of species not definitely stated in the reports.

1/ And Nebraska.
2/ California and Nevada.

1/ Figures in this line are as reported.
2/ Figures in this line are those estimated by kinds of wood in U.S. Dept. Agr. Bul. 1119, Lumber Cut of the United States, 1870-1920. The later national estimate of 35 million feet was not distributed by species.

Table 27.---Reported hardwood and softwood lumber production, by State and region, and estimated production of hardwoods and softwoods by State, 1921

(Thousand feet board measure)

Figures preceded by an • are Forest Service estimates.
1/ Includes 87 M feet of Douglas fir.
2/ California and Nevada.
3/ Includes 61 M ft.b.m. of Alaska yellow cedar.
4/ Includes 833 M feet b.m. of "Big Tree".

Table 51.--Reported hardwood and softwood lumber production, by State and region, 1945

(Thousand feet board measure)

Figures preceded by an • are Forest Service estimates.

1/ California and Nevada.

2/ Includes 71,361 M feet of Incense cedar, 30,660 M feet of Port Orford cedar, 42 M feet of Alaska cedar, and 180,462 M feet of western red cedar.

3/ Includes 7,744 M feet of noble fir, 48,617 M feet of red fir, and 4,067 M feet of silver fir.

4/ Includes 475 M feet of "Big Tree".

Detail by species, by States, regions, or United States totals, are not available unless given.

1/ Prices are given f.o.b. mill except for the years 1899 and 1904 for which prices are not so recorded.
2/ Based on Census reports which gave quantities for States but not for kinds of wood.
3/ Probably includes aspen in some States.

1/ Prices are given f.o.b. mill except for the years 1899 and 1904 for which prices are not so recorded.
2/ Based on Census reports which gave quantities for States but not for kinds of wood.
3/ The production in Arizona, Nevada, and New Mexico - which was combined in the original report has been allocated to Arizona

1/ Production reported by California: however, totals given for certain years include the following amounts:

1922 - 8,512 in Oregon
1923 - 35,697 in Oregon
1924 - 43,780 in Oregon
1925 - 20,698 in Oregon
1927 - 400 in Miss.
1930 - 2,964 in Louisiana
1931 - 551 in Louisiana
1932 - 100 in Louisiana
1933 - 823 in Louisiana
1936 - 527 in Oregon
1937 - 625 in Oregon
1938 - 650 in Oregon
1939 - 700 in Oregon
1940 - 436 in Oregon
1941 - 70 in Oregon
1945 - 1 in Oregon

2/ Prices are given f.o.b. mill except for the years 1899 and 1904 for which prices are not so recorded.
